Education

Fitchburg State University — Fitchburg, MA

GPA: 3.87/4.0 | Bachelor of Science in Computer Science | Applied Mathematics | Data Analytics — *May 2026*

Technical Skills

Languages: HTML, CSS, TypeScript, Python, Java, C#, PHP, SQL

Backend: .NET, FastAPI, Spring Boot, Node.js, Go

Frontend: ReactJS, Redux, Next.js

Databases: PostgreSQL, MongoDB, MySQL

Infra & Tools: Supabase, Redis, Docker, Git, Postman, Azure, Jira, Cursor, Gemini, OpenAI, Claude, Figma MCP, AWS, EC2, Nginx, Linux, Certbot

Experience

Software Developer Intern — June 2025 – August 2025

OneHope — *Pompano Beach, FL*

- Developed an **internal scripting and versioning tool** by delivering **5** full-stack features end-to-end in C# .NET, brought **hundreds** of SQL objects across **3** environments under source control
- Eliminated duplicate data and deployment errors by hardening stored procedures and auto-standardizing job owners using dynamic SQL
- Replaced manual scripting by automating SQL Agent job cataloging against system views, giving the team a clean inventory for source-control planning

Software Engineer Intern — January 2025 – April 2025

New England Investment Consulting Group LLC — *Boston, MA*

- Ensured on-time delivery for a **finance and HR management app** by leading a team of **3** interns to scope work, and run code reviews for **10+** code merging requests
- Reduced frontend load times **25%** by migrating real-time sync from React state to server-side Redis Cache
- Cut manual HR processing **30%** by building dynamic forms with file uploads, status tracking, and role-based pay logic across **9 levels** with zero regressions

IT Help Desk Technician — September 2023 – May 2026

Fitchburg State University - Technology Department — *Fitchburg, MA*

- Support a campus of **4,000+ users** on Windows/macOS by resolving software/network issues, and troubleshooting emergency classroom A/V failures

Projects

Coner - Professional Social Discovery App | *Frontend Developer* | *React Native, TypeScript* — ***Remote**, Vietnam*

- Delivered an **app matching remote workers to café co-working meetups** for iOS/Android by shipping **22+** reusable, strongly-typed components through **6** core flows
- Eliminated redundant API calls on app transitions by implementing caching and auth persistence using TanStack Query and Supabase + SecureStore

TikTok Vietnamese Food Discovery Pipeline | *FastAPI, PostgreSQL (pgvector), Whisper STT, OCR, Notion API*

- **Extracted critical information from Vietnamese TikTok food videos by designing an end-to-end pipeline (video → multi-modal extraction → structured output → semantic search)** 2.25 entities/video using Azure Video Indexer
- Recovered **60%** of missed mentions by layering parallel OCR on top of Whisper STT; achieved **80%** place extraction and **50%** address coverage via two-pass LLM pipeline with 92% fuzzy dedup
- Achieved zero data loss by implementing upserts with exponential backoff and persisting results for vector retrieval using pgvector

Real Estate Search & Insights Platform | *Next.js, Leaflet.js, PHP, MySQL, cPanel Hosting* — *titus-duc.calisearch.org*

- A full-stack **California property search platform** that serves **500** listings/request at **1.36s** avg (**28%** faster filtered) by implementing **25+** filters and **10** sort options
- Achieved map renders at **~202ms** and detail loads at **~92ms** by adding quick-view, scroll restore, favorites, compare, and interactive map insights
